Like nothing else...

NedZink NOVA COMPOSITE[®]

— Surprising, inspiring, very much a material of its own. A material with centuries of experience, but simultaneously it is open to tomorrow's ideas. Mature, but without losing its youth. Endowed with the power to present a monumental identity or else airy, contemporary looks. Zinc is such a material. Durable and pure yet mellowed – as well as being light and maintenance free.

NedZink's NOVA COMPOSITE gives the qualities of zinc an extra dimension. Its many talents lend themselves to new ideas in facades, roofs and interiors. With a layer of polyethylene between two layers of zinc, NOVA COMPOSITE can easily be used as a cassette. Self-coloured, rigid and extremely stable – enabling untold applications of zinc.

Monumental identity like no other...

NedZink NOVA COMPOSITE®

— You are always looking for new and innovative materials, preferably those tickling your fantasy with the right balance of flexibility, looks, cost, maintenance and workability. Materials that can change the appearance or identity of a building, a street or even a whole district, thereby giving your design a lasting outlook.

NOVA COMPOSITE opens the way to new ideas in exterior wall cladding. New forms, new structures, a new drive. The very special character of zinc captures the properties of a new and practical building material. Dynamic looks, but purposeful as well, encapsulating that freedom of design that designers and architects desire so much. As refreshing and versatile as your imagination allows.

Innovation with experience like no other...

NedZink **NOVA COMPOSITE**[®]

NOVA COMPOSITE is the result of a special knowledge of materials and market, a clear vision of the future of exterior wall cladding. An answer to the requests to bundle all qualities of zinc in a handy, modern product. Light and easy to work with. But every bit as important, NOVA COMPOSITE offers technical reliability of the very highest class.

The tremendous freedom of form gives the architect plenty of opportunity to give his ideas free rein while making it possible for the builders to put them into practice. NOVA COMPOSITE gives everyone good reasons to look out for new solutions and applications with zinc. This is innovation at the service of the beautiful, smart buildings of tomorrow.

Beauty from within, like no other...

NedZink NOVA COMPOSITE[®]

NOVA COMPOSITE is a building material for now and for the future. Timeless and as characterful and distinguished as you could wish, for many years to come. It retains the whimsical, self-willed nature that has made zinc popular, both for style-setting and for functional roof and wall applications.

The introduction of NOVA COMPOSITE really opens the way to spectacular interior applications. On the one hand it is a robust, stiff panel. On the other, NOVA COMPOSITE can easily be worked by the most varied techniques. Walls, pillars, signage, objects, the possibilities are endless. Pure inspiration for interior architects looking for surprising, timeless designs.

One with the elements, like no other...

NedZink **NOVA COMPOSITE**[®]

— Zinc is a natural material and just like nature it can never be entirely tamed. Natural zinc sometimes takes years to acquire its fine patina. However, NOVA COMPOSITE prepatinated zinc has already that typical colour at delivery time and, as it weathers, will merely show off the fine shades so characteristic for zinc.

When you use NOVA COMPOSITE you are going for a maintenance-free material that stands up to the elements superbly. Zinc looks, combined with modern techniques for working it. A justified investment that gives buildings not just a fine appearance but also a rain coat, a warm jersey, a sound barrier and a moisture regulator which makes them last for years.

Build on NedZink

As a passionate player in the market for rolled Titanium Zinc (Nederlands TitaanZink or NTZ), NedZink is inspired each day by the demand from architects, designers and users for existing and new possibilities.

NedZink stimulates the achievement of durable and high quality construction projects with bright-rolled, prepatinated and textured zinc. As a trading partner NedZink ensures reliable deliveries, knowledge, quality and service. As a market leader NedZink is an active promoter of creative zinc applications.

NedZink is also aware of its responsibility with regard to people and the environment. Future-oriented business management and investments in up-to-date production techniques reinforce its market position, and create room for new developments.

NedZink is part of the leading international holding company Koramic Investment Group. Production takes place in the Netherlands. There are sales offices in the Netherlands, Belgium and Germany.

NedZink. Think Zink.
